### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance:
2. None of the prior art extraction process teach or suggest the solvent extraction process for the extraction of lipids and fatty acids from Perna Canaliculus solids, where the solvent is selected from the group consisting of acetone, hexane and ethyl acetate and the solvent is removed from a mixture of dissolved lipids and solvent by nanofiltration, then the remaining solvent is removed from the concentration formed by nanofiltration. The process obtains high levels of polyunsaturated fatty acids (PUFA) of C20:5 and C22:6, as depicted in Tables 1 and 2. The process is conducted at or below ambient temperature.

The closest prior art references are McFarlane (US 4,455,298), Beaudoin (US 6,800,299) and in Macrides (WO 97/09992).

In McFarlane ('298) the process takes the dry mussel extract (Seatone®) and extracts lipids with ethyl acetate without filtration; and the solvent is dried before evaporation which generally requires heat. In '298 there is no disclosure that there was a desire to obtain fatty acids.

Beaudoin ('299) is a solvent extraction process for marine animals, however, it is mainly used with krill (shrimp) and Calanus (a crustacean type species like krill), and fish. The process discloses that it can use acetone but preferably uses a two step extraction process where acetone is used to dehydrate the animal and ethyl acetate is used to extract the lipid. Additionally, the process of Beaudoin uses heat to remove all

Art Unit: 1621

traces of the solvent. Beaudion's chromatography results do not show the amount of fatty acid obtained from their lipid extraction process.

Macrides ('992) is an extraction process that uses supercritical CO<sub>2</sub>. The extracts of the Applicant's claimed process were compared to the extracts of the process set out in Macrides (WO 97/09992) at Table 1 in the specification. The process of '992 is currently one of the more widely used processes to extract lipids from *Perna Canaliculus*. Further, the comparison test shows that for Macrides, the resulting lipid extract have a considerably lower percentage of the desired PUFA than the extract of the claimed process. Lastly, the extraction process of '992 is conducted at temperatures of 40°C which is above ambient temperature.

Examiner noted that maintaining the extraction temperature at ambient temperature or below is important and recognized in the art, because high temperatures would degrade the PUFA. (Applicant's [0010]). Further, '299 notes that high temperatures negatively alter the lipids. (page 2, lines 24-23).

Furthermore, none of the above references disclose the use of nanofiltration.

Prevost et al. is the only reference that suggests the use of nanofiltration in a process that extracts lipids from animals and plants. However, the filtration is conducted under extraction conditions which require considerable pressure to maintain gaseous propane (solvent) in a liquid form for use as the liquefied solvent. Further, pressurization of the solvent extract is needed to drive the nanofiltration process. (see column 9, lines 8-15).

Modification of the process of '298 with pressurized nanofiltration would not yield a dried solvent extract as required by '298, before the evaporation process. It would only add to the cost of the extraction process of '298.

Kosuage et al. (US 4,801,453) describes Seatone® as powder of dried and ground mussel.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
